

Siemens Energy is the partner of choice for the decarbonization journey

We are committed to accompanying our customers on their way to a more sustainable energy future. We are driving decarbonization along the entire value chain: from the supply chain to our own operations, and especially in our portfolio. In doing so, we aim to be the partner of choice for our customers and to support them in their transition to a sustainable energy world.

Our goals

Our status

Three questions to...

Christian Bruch
CEO and CSO
of Siemens Energy

How does Siemens Energy support the EU's 2050 climate neutrality goal through its business strategy?

We walk the talk: Siemens Energy has committed to becoming climate neutral by 2030. And, moreover, we support our customers on their individual journeys toward decarbonization. With our products, solutions and services, we can push the transition to a more sustainable energy world. By covering almost the entire value chain with our innovative technologies, we are able to turn ideas into reality.

What are your top priority solutions when it comes to decarbonization?

It is critical that we drive future technologies and, at the same time, have the courage to choose interim solutions. The shift from coal to natural gas could be one such interim solution on the way to a climate-neutral economy. Combining conventional and renewable energy systems is key to meeting the world's need for sustainable, reliable and affordable energy. Green hydrogen will also play a major role in our future energy mix. We now need to scale up volumes of green hydrogen and bring down the costs. The policy task is to define and implement the right boundary conditions.

How do you envision Siemens Energy's future positioning with regard to decarbonization?

I am convinced that Siemens Energy is on the right track, and we have every reason to be confident. Siemens Energy should be the company that everyone immediately thinks of when it comes to decarbonization. We energize society – that's our purpose. Together with our customers and partners, we can make a real difference in shaping the energy world of tomorrow.
